

Fractal Mind Maze

You know what a fractal is, don't you? It is a thing composed of many parts... each part similar to the other parts... and each part similar to the WHOLE thing... But not exactly the same. Fractals are not random... they are very regular. Very regular, and precisely defined. And while they may LOOK complicated, they are made of very simple parts. There are fractals in many forms of art and nature — in geometry and geography, in the shapes of flowers and coastlines, in classical music and the songs of birds... even in the signals inside your brain. Oh yes. I consulted a mathematician to create this mp3. I'm going to explore how your mind is organized. So many different views... at so many different levels! I'm going to show you how your mind is put together. So many different memories... desires... and connections. I might even CHANGE how your mind is organized. Making new connections... perhaps even erasing old ones... You won't really know, because it all fits together. Like a puzzle. Like a map. A map of your brain, seen from the inside. From inside your mind. From inside Dominica's mind. 10 separate recordings all put together. And you'll listen to them all. You'll WANT to listen to them all. Over and over again. Waiting for the picture to emerge.

Length: 31 minutes

Our Price: \$30.00
